

# EV Charging Single Phase Inverter

The world's first EV  
charging inverter

Increase your revenue with the world's first EV charging PV inverter. It offers users the ability to charge electric vehicles up to 2.5 times faster than a standard EV charger through an innovative solar boost mode that utilises grid and PV charging simultaneously.

Your customers will save money, time, and hassle compared to purchasing and installing an EV charger and PV inverter separately, and they will also benefit from integration with the SolarEdge monitoring platform.

Whether your customer owns an EV now or just wants to be EV-ready, drive your business into the future with SolarEdge.

**solar**edge

# / Key Benefits

Combines sun and grid power for charging up to 2.5 times faster than standard EV chargers using existing electricity infrastructure

Fully integrated with the monitoring platform and easy inverter commissioning using the SetApp mobile app

Reduces workload and costs of installing a standalone EV charger and a PV inverter

Built-in meter enables separate tracking of EV power usage for visibility and control

An EV-ready solution, future-proofed for new EV purchase or replacement, and compatible with multiple EV connectors

12-year warranty<sup>(2)</sup>, extendable to 20 or 25 years

Maximises self-consumption by using excess PV for EV charging<sup>(1)</sup>

Demand-Response ready

# / Full Visibility and Control

The SolarEdge EV charging single phase inverter supports full network connectivity and integrates seamlessly with the SolarEdge monitoring platform. Homeowners can track their charging status, control vehicle charging, and set charging schedules.

## Feature highlights

- / Smart-scheduling for use with Time of Use (TOU) rates — charge from the grid during off-peak hours
- / Track PV, EV, and grid consumption for visibility and control of household energy usage
- / Remote operation via mobile app — turn charging on and off directly from your smartphone
- / View charging duration, charge energy, and percent charge from PV

# / EV Charging Comparison

	Standard EV Charger (2.7 kW 12A@230Vac)	SolarEdge EV Charger Mode 3 with Solar Boost Mode Charging speed depends on PV production (Maximum 7.4 kW 32A@ 230Vac) <sup>(3)</sup>
Added miles per 1 hour of charging <sup>(4)</sup>	5 to 9 miles	21 to 25 miles
Charge time needed to meet average daily mileage <sup>(3)</sup>	4 to 8 hours	1 to 1.5 hours

<sup>1</sup> Minimum charge rate is 1.5kW

<sup>2</sup> Cable and connector are not included

<sup>3</sup> Check your car manual for maximum charge rate

<sup>4</sup> Assuming 3 miles/kWh and with a UK household average driving distance of 30 miles per day
