Inverter Model Selection Guide for the SolarEdge Home Hub MultiRange Concept Inverter

This guide is intended to assist users to select the appropriate inverter model and to identify the correct inverter model labels for their specific application.
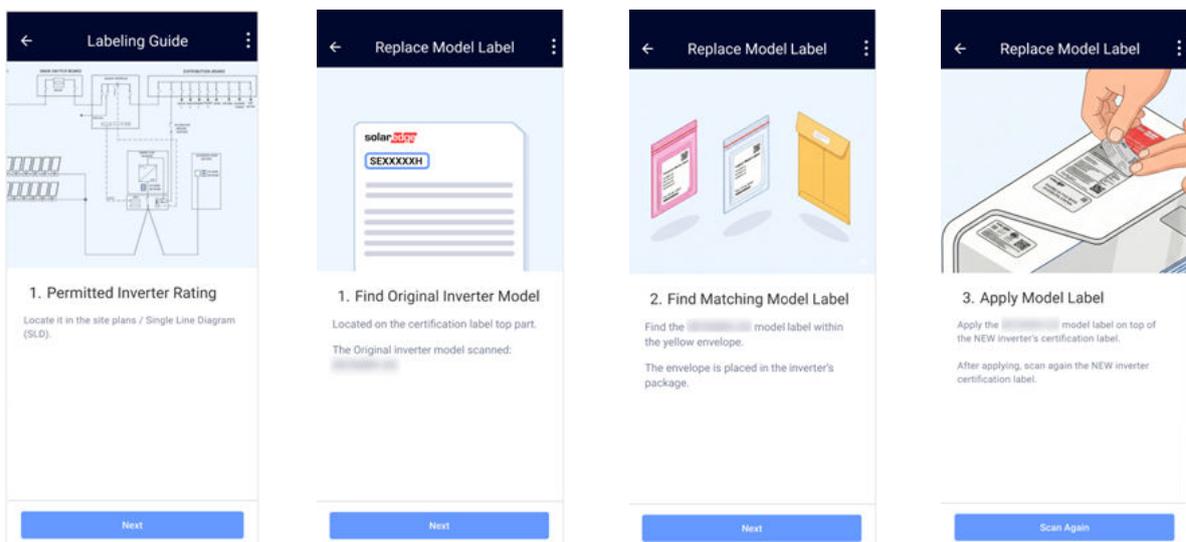

Inverter model selection guidelines

1. Check if the correct inverter model label is already affixed to the inverter.

   If not, it is packed separately in the inverter box.
   > **NOTE**
   >
   > The selected inverter model must match the approved project plan set and installed OCPD devices.

The correct inverter model label shall be placed at the same location as the existing model label on the inverter, and shall not be placed elsewhere.

Ensure that the label is properly attached so that it does not curl at the edges or corners.

2. Open the SolarEdge Go application on your mobile device.

3. Scan the two QR codes on the certification label together at the same time.

4. Select the appropriate inverter model from the app's drop-down list.

	NOTE
	After confirming the inverter model in the application, only the SolarEdge support team can modify the inverter model.
